Experience

Amadeus (September 2019 – Currently) Software Developer – Loyalty

As a part of the functional development team in the Loyalty Community Project my responsibilities are as follows:

- Back-end development, testing, and automation using various languages (Java/Python) and frameworks (Spring Boot/JPA)
- Maintenance of backward compatibility, configurability, and code quality which are quite important since Loyalty is a big scale on-going community project.
- Solution proposals, technical analysis, technical point of contact for one of the most important modules in Loyalty (Tier).
- Leading an open source project and mentoring interns who works for that project.

Softtech (May 2019 – September 2019) Full stack Developer – Rally

As a part of Rally architecture team, my responsibilities were:

- Maintaining the rally framework and add new functionalities according to business teams' needs.
- Improvement of the current technologies, structure and application design.

OBSS (February 2018 – May 2019)

Solution Architect / Software Developer – Atlassian

- Focused on Atlassian tool solution design, architecture, and implementation.
- Finding suitable solutions for customers.
- Continuous Integration and Continuous Deployment.
- Integrating applications and tools in different environments and technology stacks.
- DevOps transformations.
- Plugin development for Atlassian tools.
